

HYOSUNG

Hyosung NBS Software replaces MP2S Global Software with inspiring technology innovations that revolutionize the customer experience. We are here to guide you through the software discussion...

Software is the backbone of a modern financial network, and you require the latest in functionality, ease of use, and most importantly, security. The Hyosung digital banking NBS software is designed to streamline the banking and retail experiences by expanding the potential of remote ATMs, building consistency across all channels, all while keeping your customers' information safe.

Hyosung has the broadest range, strongest security, and most deeply integrated software solutions in the industry. With Hyosung's core-integrated, multi-vendor software, our FI customers are transforming their branches by expanding the self-service experience.

CashTrans is prepared to review your current and future software plans to maximize your investment. Here are three major NBS software options:

1. Core Integration will major core processors
2. MoniPlus Multivendor Application
3. ActiveTeller

So lets get started by reviewing next steps:

Step#1 - Review equipment and current software status.

Step#2 - Certification Review with Core and determine upgrade path and decision to proceed?

Step#3 - Open Project request and RFP from CashTrans.

Step#4 - Initiate Project w/CashTrans and move to Bring Live!

CashTrans is excited to make this affordable Hyosung software application available to financial institutions across the southeast. Banks and credit unions should consider upgrading or adding this software to enhance the customer experience.
