

## ATM Owners across the U.S. are weighing the benefits of upgrading to Windows 10...

**CashTrans** wants to make our clients and friends aware that on January 14, 2020, Microsoft will stop supporting Windows 7 and will no longer provide security updates, application patches or technical support for ATM deployers running Windows 7.

Many financial institutions see upgrading to **Windows 10** as a **big opportunity to support branch transformation solutions** especially as they consider the latest in self-service or assisted service solutions. **Windows 10** also enables the integration of technologies such as Internet of Things (IoT) smart sensors, biometrics, and contactless/mobile payments technologies as part of the ATM offerings. Furthermore, **Windows 10** is based on improved security architecture which is vital in today's environment.

**NCR** has just published a white paper that explains why financial institutions and other ATM deployers need to start preparing now to upgrade their ATMs and other self-service terminals to **Windows 10**.
